---

I secured a start-up project with a local brand, coordinated its initiation, and oversaw its development from the seller's layman perspective.

## SKILLS

---

|                 |                                                                                            |
|-----------------|--------------------------------------------------------------------------------------------|
| Languages & Web | JavaScript, HTML, CSS, Python                                                              |
| AI & Automation | LLM APIs, prompt and context engineering, n8n workflow automation, chatbot design          |
| Backend & Data  | REST APIs, database-backed applications, third-party integrations                          |
| Product         | MVP scoping, rapid prototyping, requirements gathering, stakeholder and partner management |

## PROJECTS

---

### Chunker — PDF chunking tool 2025 — 2026

A working MVP that splits long PDFs into clean, retrievable chunks for use with language models. Designed the flow, built the interface, and wired the processing pipeline with n8n automation and LLM calls. Shipped publicly at [chunkerthechunky.lovable.app](https://chunkerthechunky.lovable.app).

### Dopa+Me — chatbot workspace 2025 — 2026

A conversational assistant with an online workspace: account setup, persistent sessions and a prompt architecture tuned for consistent answers. Handled the full build — UI, conversation design and API integration. Live at [dopame123.lovable.app](https://dopame123.lovable.app).

### Showcasefolio — portfolio site 2026

Self-built portfolio collecting the projects above with write-ups of the stack and decisions behind each: [showcasefolio.org](https://showcasefolio.org).

## EXPERIENCE

---

### Project Manager — Synthrium Apr — Aug 2026

- Won the start-up its first client project: the build-out of a branded coconut-processing factory and the operating model behind it.

Business Development — Pandyt

Jun — Sep 2025

- Opened partnership conversations with DFCC Bank and Pizza Hut, taking each from cold introduction to commercial discussion.
- Built the pitch narrative and materials used in those meetings.

---

Dear Hiring Manager,

I'd like to be considered for a role on your team. Fintech is where I want to build: the problems are concrete, the constraints are real, and small teams ship things people use with their own money.

I work in JavaScript, Python, HTML and CSS, and I've shipped two applications end to end — a PDF chunking tool for language-model pipelines and a chatbot with its own workspace and account setup. Both meant doing all of it: interface, API integrations, data handling and the automation glue between services. I use AI tooling heavily and deliberately, and prompt and context engineering is a real part of how I build rather than a line on a list.

Before this I worked on the commercial side. At Synthrium I won the company its first client project and ran it as sole owner; at Pandyt I opened partnership discussions with DFCC Bank and Pizza Hut. That work taught me to ask what a feature is actually for and who pays for it — useful instincts for a start-up engineer, and the reason financial products interest me in the first place.

I'm applying at a junior level and I'm clear-eyed about that: I want experienced engineers to review my code, hold me to a standard, and give me responsibility as I earn it. I pick up new stacks quickly and I'd adapt to yours.

I'd welcome a conversation, a technical assessment, or both. Thank you for your time.

Kind regards,  
Shevan Gunsekera
